# Full Fibre broadband

is now available to order  
in your area

**Great news! We've upgraded the broadband network in your street, and you can now order a faster, more reliable and future-proof 'Full Fibre' service from the providers using our network. This pure fibre technology is known as FTTP or Fibre to the Premises.**

This technology allows ultrafast speeds of up to 1Gbps. If your family uses several devices at once – game consoles, tablets, on demand TV, and more – then FTTP will be much faster than copper broadband and won't slow down any of your gizmos.

But FTTP is more than just speed. Fibre networks are also more reliable than copper based networks, which means you can expect more consistent quality of your broadband.

## How to get ultrafast fibre from this new network

First thing you need to do is visit [www.openreach.co.uk/ultrafastFTTP](http://www.openreach.co.uk/ultrafastFTTP) to see which providers can offer ultrafast fibre broadband. Then, make your choice and visit their website to find out how to order.

Ultrafast broadband is capable of download speeds of up to 1Gbps vs Superfast broadband download speeds on the Openreach Network of up to 80Mbps. The download speed you actually receive will depend on the service plan that you purchase from a communications provider. Upload speeds are usually significantly slower. Your communications provider will tell you at the point of sale what speed you can expect to receive on your line. Typically, FTTP fault rates are 35% lower than the fault rates of FTTC lines.
